

OTORIO

Global Leader in Safe Industry 4.0 Digitalization

Times are Changing

Traditional industries worldwide are undergoing a technological transformation, often titled as industry 4.0, smart production or industrial digitalization. Along the promising business opportunities, the expanding organizational IT/OT convergence exposes organizations to new cyber risks.

Industrial cyber risks can potentially lead to production downtime, loss of intellectual property, physical damage, loss of reputation and even loss of life.

These risks have a generic yet unique nature- even the standard procedure of updating and patching vulnerable ICS involves great complexity.

As the threat landscape continues to evolve, industries need to embrace a comprehensive and continuous approach to cybersecurity in order to enjoy the benefits of digitalization. This includes ongoing monitoring process and risk prioritization according to the risks' potential impact and remedy costs. This continuous process proactively governs and reduces cyber risks, hence, allowing better up-time, productivity, safety and new smart production opportunities.

OTORIO An industrial-native, digital born company

OTORIO is an advanced Managed Security Service Provider, founded by Israeli defense cyber security experts, partnering with global leading plant engineering group. OTORIO's unparalleled forward-looking products and services are delivered by world-leading "special forces" talents, leveraged by proprietary cutting-edge technology.

From end-to-end, we're all in

OTORIO's solution counteracts current and upcoming industrial cyber risks, ensuring safe industry 4.0 digitization as an integral part of the operational life cycle.

OTORIO's broad offering addresses the different stages and challenges a traditional industry faces when setting out on the journey of Digital Transformation:

Our offering addresses managing operational processes cyber risks, as well as supply chain interlinked risks. OTORIO's distinctive offering includes variety of service modules, such as:

- Strategic digital risk governance framework.
- Comprehensive security and risk assessment along with maturity program development.
- OT Penetration Testing (PT) providing an organizational cyber threat" reality check".
- Ongoing and continuous advance cyber risk management – Industrial Security Operation Center (OT SOC), Cyber Threat Intelligence (CTI) and unparalleled Security Orchestration, Automation and Response (SOAR).
- IT-OT converged Incident Response (IR) and mitigation services.

Orchestration and automation of operational security tasks results in the immediate organizational ability to reduce the potential impact of inevitable incidents. OTORIO's SOAR platform uses an intuitive operational User Interface (UI), and is operated by the production operational personnel, based on their inherent expertise along minimal competence upskilling.

We are engaged throughout the entire security process at different touch points.

OTORIO enables modern industries and manufacturers safe and sustainable growth without the additional risks associated with Industry 4.0 vulnerability to cyber-attacks.

About

OTORIO was founded in Israel as a JV of Israeli defense professionals together with an Austrian leading plant engineering group. The teaming brings along 160+ years of industrial engineering and operational technology knowhow for leading industrial customers in a variety of verticals.

**Daniel Bren**

Co-founder and CEO, Brig. Gen. (res.)

Daniel (Danny) Bren was the Commander of the Israeli Defense Forces (IDF) Cyber Defense division, the IDF's CIO.

**Yair Attar**

Co-founder and CTO, Mr. Yair Attar is a senior cyber security expert with diverse experience in various aspects of cyber security, incident response and threat hunting.
